A renewal check-in that starts with *listening*

What I built to surface resident concerns earlier, what broke, and what I'd improve.

What still needs attention?

01 **Lease ending soon**
A date makes the resident eligible for a check-in.

02 **Still unresolved?**
A concern needs a conversation to become visible.

A lease end date tells you when to reach out. It doesn't tell you whether a resident has an unresolved concern.

A check-in, then a next step

BEFORE THE MESSAGE

Lease dates → **Draft check-in** → **Manager review**

AFTER APPROVAL

Send check-in → **Resident replies** → **Review + follow up**

Each resident-facing follow-up also needs approval.

I built a workflow that prepares check-ins before renewal, brings drafts to a manager, and routes resident replies for follow-up.

AI helps. The manager decides.

AI helps

Prepare a draft

Sort the reply

Suggest wording

Manager decides

Review concerns

Choose the response

Approve each send

AI drafts messages and helps sort replies. The manager reviews concerns and approves every individual resident-facing message before it leaves.

Keep the first message simple

01 **One clear question**
Ask how things are going.

02 **Brief and personal**
Use the resident's first name.

03 **Keep promises out**
No renewal offers or rent-increase notices.

The opening message asks how things are going. Wording checks help keep it brief and focused, without drifting into renewal terms or promises.

An edit could bypass the check

THE GAP

Check draft → **Manager edits** → **Send**

Final wording unchecked

THE FIX

Manager edits → **Check again** → **Send**

A manager could change a draft after its wording check. I added another check immediately before sending, against the message that would actually leave.

Skip could queue someone again

THE BUG

Already sent	→ Tap Skip	→ ~~Queued again~~

THE FIX

Already sent	→ Tap Skip	→ Keep history

Skip is refused once the message has been sent.

Skip could reset someone who had already received a check-in. I restricted it to messages still awaiting review, preserving completed sends.

Uncertainty needs a person

WHAT COMES BACK	WHAT HAPPENS
A question	Manager review
A concern or unclear reply	Manager review
AI processing fails	Flag for attention

Unclear replies, questions, grievances and sensitive concerns go to human review. If AI processing fails, the workflow also flags it for attention.

Approval is only one part

The draft

↓

The edit

↓

The second click

↓

The unexpected reply

Building this changed what I paid attention to: what happens after an edit, a repeated click, or a reply the workflow cannot confidently handle.

I checked the awkward cases

I CHECKED	RECORDED BEHAVIOR
Draft wording	Passed wording checks
Approve twice	No second email
Skip after sending	Skip refused
Reply matching	Linked to the resident

I checked message wording, repeated approvals, Skip after sending and reply matching. These checks helped verify specific behaviors in the workflow.

What I'd improve next

01 **Understand difficult replies**
Check more ambiguous and sensitive responses.

02 **Handle simultaneous approvals**
Prevent two approvals sending at the same time.

03 **Recover interrupted work**
Reconcile emails that sent but were not recorded.

I'd focus next on difficult replies and interrupted sends, so the workflow can handle more of the situations that make follow-up unreliable.
